

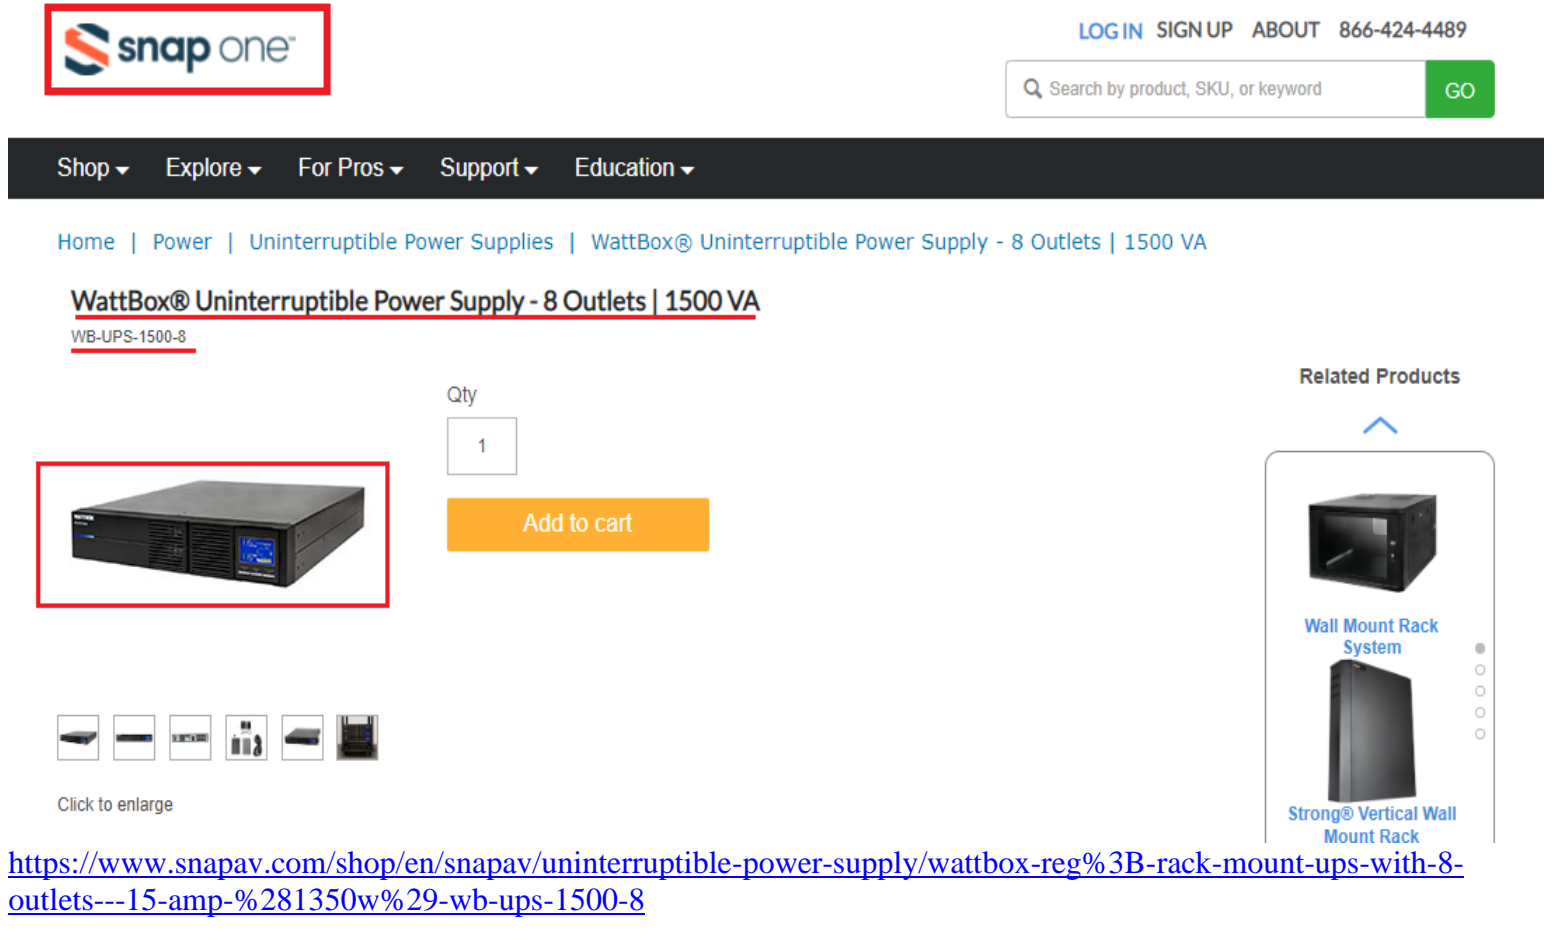

EXHIBIT 2

Claims	Accused Product: Snap One-WattBox Uninterruptible Power supply:WB-UPS-1500-8
1. An apparatus for generating a signal indicative of a battery remaining time, comprising:	<p>The accused product provides an apparatus for generating a signal indicative of a battery remaining time (e.g., battery information which is an indicative of battery remaining time displayed on the LCD display of the accused device and web portal.)</p>  <p>The screenshot shows the Snap One website interface. At the top, there is a navigation bar with links for LOGIN, SIGN UP, ABOUT, and a phone number 866-424-4489. Below this is a search bar with the text "Search by product, SKU, or keyword" and a green "GO" button. A dark navigation bar contains links for Shop, Explore, For Pros, Support, and Education. The main content area displays the product "WattBox@ Uninterruptible Power Supply - 8 Outlets 1500 VA" with the model number "WB-UPS-1500-8". The product image is highlighted with a red box. To the right of the image is a quantity selector set to "1" and an "Add to cart" button. Below the main image are several smaller thumbnail images. On the right side, there is a "Related Products" section showing a "Wall Mount Rack System" and a "Strong® Vertical Wall Mount Rack".</p> <p>https://www.snapav.com/shop/en/snapav/uninterruptible-power-supply/wattbox-reg%3B-rack-mount-ups-with-8-outlets---15-amp-%281350w%29-wb-ups-1500-8</p>

WattBox® Uninterruptible Power Supply - 8 Outlets | 1500 VA

The WattBox® Uninterruptible Power Supply (UPS) is packed with features to help keep vital equipment up and running in the case of power loss. This Pure Sinewave UPS provides 8 outlets of battery backup and full automatic voltage regulation (AVR) to prevent costly interruptions, as well as a 'Graceful Shutdown' of a connected PC via USB port. With this model, you'll get a 1500 VA capacity, up to 5:30 minutes of battery backup at full load (1200W), and 13:30 minutes of battery backup at 50% load (600W).

Large Multifunction LCD Readout

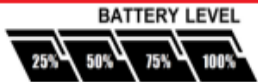

The multifunction LCD readout provides ready access to power/battery condition vitals such as Runtime and Load. Plus, it incorporates an auto-dimming function, which helps minimize distractions when in use.

CONNECTING EQUIPMENT TO OUTLETS

Critical equipment is connected to the uncontrolled outlets so they remain on until the UPS battery is depleted. Noncritical equipment is connected to controlled outlets so they can be set to turn off once the battery is depleted to a set level. Controlled outlets can also be set to remain on for additional critical loads. Use the remote management connection or the front panel LCD to configure the controlled outlets.

https://www.snapav.com/wcsstore/ExtendedSitesCatalogAssetStore/attachments/documents/PowerManagement/ManualsAndGuides/WB-UPS_Manual_200427tw.pdf

KEY FEATURES

Inlet Surge Protection – Built-in protection for the UPS and all connected equipment against power surges.

Automatic Voltage Regulation – Incoming power is monitored to avoid harmful over- or under-voltage conditions. Power is increased in Boost mode and decreased in Buck mode.

Battery Backup – Battery backup for powering critical equipment during power outages and fluctuations. Batteries can be serviced without turning the UPS off.

Programmable Outlets – Noncritical equipment can be connected to programmable outlets that turn off early to save battery power.

Emergency Power Off – Built-in contact for EPO.

PC Connection – Built-in connections for PC access to the GUI and shutdown control to notify the PC when battery level is critical.

SNMP Card (sold separately) – Use the SNMP card to access the GUI over Ethernet and notify devices on the network when the battery level is critical.

System Summary Check

Live feedback allows for remote management and configuration of the UPS. Now you can get a real-time summary via your computer. It's as if you were standing right in front of the UPS on the jobsite!

Remote Diagnostics

Diagnostic testing lets you perform a runtime calibration with installed load, validate the battery is still good, and report the battery's remaining life. It also includes the results and date of the last battery test performed.

Data Logging & Status Records

Did you know your power company may not always send 110V to your outlets? Thankfully, a connected WattBox UPS performs power correction to restore full performance to your A/V or data system. This network card provides event logs and status records, which you can use to analyze system performance.

User-Upgradeable Firmware

Like other enterprise-level networking products, this network card features user-upgradeable firmware. This ensures you always have the most up-to-date functionality available.
